Subject: Electrical Testing (Model [redacted]) file: Air-Fed Incinerators

Gentlemen:

To confirm our conversation of several days ago, we wish to advise you that in conjunction with an export order that we have for two reactors which are being shipped to [redacted] we are setting up a facility at our plant to test the electrical agitator drive motors for these units, which require 15 HP, 220 volt, 50 cycle, 3 phase power. 25X1

In addition, we will be able to handle in the same set-up the following other electrical characteristics, which are most common for foreign installations:

A. 7½ HP, 220 volt/380 volt, 3 phase, 50 cycle.

B. 2 HP, 110 volt/ 220 volt, single phase, 50 cycle.

C. 1/3 HP, 110 volt/220 volt, single phase, 50 cycle.

The above requirements will be furnished by a motor generator and accessory equipment, which we expect to have in our plant within the next few weeks.

If we can be of any service to you in testing out any of your motor requirements that require the above, or any other, we would be very much interested in hearing from you.
